### Technology Management Resources Announces *CITATION™ Remote Lockbox Capture*

Orlando, FL – May 10, 2007 – Technology Management Resources (TMR), an Orlando based payments solution provider, has implemented *Remote Lockbox Capture* at two customer locations. This new solution provides the option to scan and capture payments locally and transmit them to a central location for processing.

Traditional payments processing (lockbox) solutions require customers to send their payments to a centralized payment location for processing. As banks expand their market presence but consolidate backroom processes, they find that business customers in remote locations do not want their payments mailed across the state or in some instances across the country.

Remote Lockbox Capture addresses this by enabling banks to sell “localized” lockbox services; providing the business customer a local address for their billings. Norman Picard, TMR Sales Analyst stated “For Banks, the main concern is to make business customers more comfortable by establishing a local presence in their market. With Remote Lockbox Capture, everything from mailing address to reports and accounts receivables files are handled and delivered locally. As far as the business customer is concerned they are being processed in their local market.”

Meanwhile the bank, utilizing TMR’s *CITATION™ e-Remit* modular remittance processing solution, retains the efficiency of consolidated backroom processing.

“As banks look to consolidation and centralization of backroom services; the leaders will recognize the value of creating services others are unwilling or unable to provide and taking those services to the market as opposed to making the market come to them,” Picard summarized.

#### About TMR:

Technology Management Resources offers a wide range of automated payments processing solutions to financial institutions and businesses nationwide. Headquartered in Orlando, FL, TMR has 18 years of dedicated service to the payments industry. TMR’s products include: *CITATION™ e-Remit* – image based lockbox, *CITATION™ e>Returns* – automated returns (NSF) re-presentment, *CITATION™ e-Scan* – full page image capture, *CITATION™ i-View* – Web based transaction document image and data delivery, and *CITATION™ i-Deposit* – remote merchant deposit. Each product is delivered in combination with TMR’s comprehensive customer support.
